/note="Vector: Lambda Uni-ZAP XR, excised phagemid
pBluescript SK; Site_1: EcoRI; Site_2: XhoI; Seeds were
surface-sterilized, germinated and grown aseptically in
the dark at room temperature on filter paper with water,
nystatin and cefotaxime in covered crystallization
dishes. Roots were harvested. The tissue, total RNA, and
dishes. Roots were prepared, a cDNA library was made in the
TJ Close lab (Choi, Close, Fenton) at the University of
California, Riverside. The cDNA clones were in vivo
excised to give pBluescript phagemids before
normalization was carried out. The mass excision of
phagemid library and normalization were done in HT Nguyen
lab by D. Zhang at Texas Tech University, Normalization
protocol used was that of Soares. Plasmid DNA
Anderson lab (all other authors)."

                                                                                       AAZ21481 to AAZ21495 represent fragments of the human sensory neurone specific 2a (SNS-2a) nucleotide sequence. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a
                                                                                                                                                                                                                                                                                                                                                                                                                              Sensory neurone specific 2a; SNS-2a; sodium channel protein; pain; voltage gated; hypersensitivity; ss.

                                                                                                                                  Query Match
                                                                                                                                                                                     The present sequence encodes a type 5 sodium channel protein designated PN5. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and headache

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                            CC CDNA was isolated from a human dorsal root ganglia tissue cDNA library by CC PCR amplification (see also AAF30122-23). A full-length sequence is given CC in AAF30101. Human NaN belongs to the a-subunit voltage-gated sodium CC channel protein family and produces a TTX-R sodium current. Such channels CC underlie the generation and propagation of impulses in excitable cells CC such as neurons and muscle fibres. Preferential expression of NaN on CC sensory neurons innervating the body (dorsal root ganglia) and the face CC (trigeminal ganglia), but not on other neurons, makes it a very useful CC target for diagnostic and/or therapeutic uses in relation to acute and/or CC chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves CC administering an agent that alters sodium current flow through NaN CC channels, or which modulates transcription or translation of NaN mENA, in CC channels, or which modulates transcription or translation are used in CC dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in CC channel expression or (antisense) to down-regulate NaN expression, in the CC channels of disease, and in the recombinant production of NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a partial cDNA for a novel human

                                        The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present CDNA sequence encodes the human SCN12A-s sodium channel
                                                                                                                                                                                                                                   Sodium channel alpha subunits SCN12A and SCN8A of human nervous stogether with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; gene; ss; sodium channel subunit; SCN12A; SCN12A-s; SCN8A; human nervous system; chromosome 3p23-21.3; excitatory cell; drug development; familial hyperglycaemia; QT extending syndrome type 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                           The present sequence is that of cDNA encoding a novel human tetrodotoxin CC resistant sodium channel, termed NAN (see AAB20121). The cDNA was cisolated from a human dorsal root ganglia tissue cDNA library by PCR CC isolated from a human dorsal root ganglia tissue cDNA library by PCR CC amplification (see also AAB20122-23). NAN belongs to the a-subunit CC voltage-gated sodium channel protein family and produces a TTX-R sodium CC current. Such channels underlie the generation and propagation of CC impulses in excitable cells such as neurons and muscle fibres. CC Preferential expression of NAN on sensory neurons innervating the body CC (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed CC method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NAN channels, or which modulates cranscription or translation of NAN mENA, in dorsal root ganglia or trigeminal neurons. NAN nucleic acids are used in gene therapy to correct disjorders associated with decreased sodium channel expression or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAF30101 standard; cDNA; 5860
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SXS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                     The present invention describes an expression vector comprising a nucleic acid sequence that encodes a mammalian Na v 1.9 sodium channel protein or its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel protein
                                                                                                                                                                                                                                                                                                                        Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a human Na v 1.9 sodium channel protein, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; and (b) measuring sodium current following exposure to the agent, where an alteration in the level of sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (4) a recombinant.
                               Sodium channel alpha subunits SCN12A and SCN8A of human nervous system together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gurb

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A sodium channel subunit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the nucleotide sequence of an isolated nucleic acid which encodes the mouse NaN channel (see AAY06597), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel cDNA was obtained from mouse trigeminal ganglia cDNA by PCR amplification using rat NaN-based primers (see AAX87618-19). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN channel activity or NaN channel mRNA agents that modulate NaN channel activity or NaN channel mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of Nau in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The gene encoding NaN has been named Scnlla

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (See AAB20121). The gene encoding NaN, termed Scrilla, is located on mouse chromosome 9. NaN belongs to the a-subunit voltage-gated sodium channel current family and produces a TTX-R sodium current. Such channels cunderlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia cand/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN meNA, in correct disporters associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 132; Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of cDNA encoding a novel mouse tetrodoto: resistant sodium channel, termed NaN (see AAB20124). The cDNA was isolated from triggeminal ganglia cDNA using primers (see AAB30120-21) based on rat NaN sequences. Mouse NaN shows 68% similarity to human Na
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 3; Fig 7A; 162pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                 expression vector; Na v 1.9 sodium channel protein; sodium channel protein; dorsal root ganglion neuron
                                                                                                                                                                                                                                      Mouse Na v 1.9 sodium channel protein encoding cDNA SEQ ID NO:5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell under conditions that allow expression of Na v 1.9 sodium channel protein to produce a sodium current into the transfected cell; (3) a method of screening for an agent that modulates sodium current in a cell by: (a) exposing the cell of sodium current is indicative of an agent capable of modulating sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (4) a recombinant capable of modulating sodium current in a cell; and (5) a method to the second under the cell; and (6) a recombinant capable of modulating sodium current in a cell; and (6) a recombinant capable of modulating sodium current in a cell; and (6) a recombinant capable of modulating sodium current in a cell; and (6) a recombinant capable of modulating sodium current in a cell; and (7) a sodium current in a cell; and (8) a recombinant capable of modulating sodium current in a cell; and (8) a recombinant capable of modulating sodium current in a cell; and (8) a recombinant capable of modulating sodium current in a cell; and (8) a recombinant capable of modulating sodium current in a cell; and (8) a recombinant capable of modulating sodium current in a cell; and (8) a recombinant capable of modulating sodium current in a cell; and (8) a recombinant 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 5822
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a mouse Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expression vector useful for stable cloning and expression of Navl.9 sodium channel at the mRNA and protein levels comprises a nucleic acsequence that encodes a mammalian Navl.9 sodium channel protein or in

                                                                                                                                                                                                                                                 В
                                                                                                                                                                                                                                                                             The present invention describes an expression vector comprising a nucleic classid sequence that encodes a manmalian Na v.1.9 sodium channel protein or cits fragment, and producing a sodium current when transfected in a cell. CC Also described: (1) a recombinant cell comprising the plasmid selected cC from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v.1.9 cC sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell cunder conditions that allow expression of Na v.1.9 sodium channel protein cc produce a sodium current into the transfected cell; (3) a method of screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; and (b) measuring sodium current following exposure to the agent, where an cc alteration in the level of sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant cc capable of modulating sodium current in a cell; and (4) a recombinant cc cell comprising the expression vector. The expression vectors are useful cfor the stable cloning and expression of the Na v 1.9 sodium channel at cc the mRNA and protein levels, and for producing sodium channel currents cc characteristic of native currents in dorsal root ganglion neurons. The cresent sequence encodes a rat Na v 1.9 sodium channel protein, which is cused in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a type 5 sodium channel protein designated PN5. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and headache

                                                                                                                                                                                                                                                                         This is the nucleotide sequence of an isolated nucleic acid which encodes the rat NAN channel (see AAY06596), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NAN channel cDNA was obtained from Sprague-Dawley rat DRG cDNA by PCR and RACE amplification (see also AAX87603-17). Rat, mouse and human NAN nucleic acids (see AAX87600-02) and polypeptides (see AAX96596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NAN, methods for identifying agents that modulate NAN channel activity or NAN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NAN in sensory DRG and triceminal neurons provides a target for selectively
                                                                                                                                                                               Sequence
                                                                                                                                                                                                                               sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The NaN gene has been named

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                         CC The present sequence is that of cDNA encoding a novel rat tetrodotoxin CC resistant sodium channel, termed NaN (see AAB20122). The cDNA was CC isolated from a dorsal root ganglia tissue cDNA library by PCR CC amplification using generic primers (from conserved resions of a-subunit condium channel proteins) and NaN-specific primers (see also AAF30105-19), CC and RACE amplification. The open reading frame shows 73% similarity to CC the human NaN sequence (see AAF3010). NaN belongs to the a-subunit CC current. Such channels underlie the generation and propagation of current. Such channels underlie the generation and propagation of CC impulses in excitable cells such as neurons and muscle fibres. CC Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other current, makes it a very useful target for diagnostic and/or therapeutic cuses in relation to acute and/or chronic pain pathologies. A claimed current flow through NaN channels, or which modulates sodium current flow through NaN channels, or which modulates codium current flow through NaN channels, or which modulates codies associated with decreased sodium channel expression or considers associated with decreased sodium channel expression of considers associated with decreased sodium channel expression of considers associated with decreased sodium channel expression of disease, consider the recombinant production of NaN polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 1; Fig 1; 162pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2001-103147/11.

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seq length: 0
